NEXT & BEYOND

## CPD SEMINAR

ALUCOBOND® OFFERS TWO DIFFERENT CPD SEMINARS WHICH ARE:

1

### HOW TO SPECIFY ALUMINIUM COMPOSITE MATERIAL

- Outlines the key technical considerations in specifying aluminium composite material
- Provides detailed analysis of the key considerations
- Opens up the discussion about the benefits of using aluminium composite material
- Discusses the principal of Rainscreen and systems available for use with aluminium composite material
- ALUCOBOND®, Sustainability and areas of contribution to BREEAM
- Makes clear what you can expect from your manufacturer in terms of design assistance

2

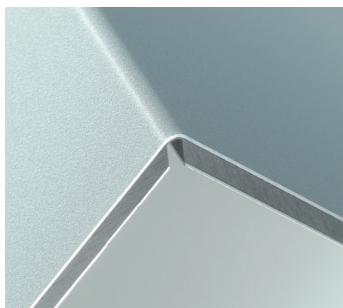

### FIRE SAFETY FOR ALUMINIUM COMPOSITE MATERIAL

- Understand what Fire Development is
- Understand what the difference is between Fire Resistance and Reaction to Fire
- Understand EN ISO 13501 classification and the various tests that contribute to it
- Fire classifications of common materials
- Understand the importance of each component to large scale fire tests
- What is the current UK Fire regulation for Rainscreen Cladding?

ALUCOBOND® offers either both seminars on the day (2 hours) or they can offer 2 individual seminars on separate days (1 hour each).

## ALUCOBOND®

### ABOUT ALUCOBOND®

ALUCOBOND® is the world market leader for aluminium composite panels. Since their introduction on the market in 1969, these panels have been used above all in architecture and for corporate identity programmes, particularly for façades, wall and roof cladding.

The panels are on the one hand outstanding due to their extreme evenness and rigidity, on the other hand they offer excellent formability with simple fabrication techniques. They are available in a large variety of colours, surfaces and formats as well as in various core variations such as a fire-retardant and a non-combustible version.

With their comprehensive know-how, 3A Composites supports architects, designers and investors in designing and realizing building envelopes.
